SUMMARY

ISTQB CTFL-certified Software Test Automation Engineer specializing in designing, building, and deploying production-grade E2E test frameworks using Playwright, Cucumber BDD, TypeScript, and Jenkins CI/CD. Proven ability to bridge manual QA and full automation — reducing regression effort, accelerating release cycles, and eliminating critical defects before they reach production. Skilled in Page Object Model (POM), API testing with Postman, risk-based test prioritization, defect triage, and Agile/Scrum delivery.

SKILLS

- **Test Automation:** Playwright, Cucumber BDD, Selenium, TypeScript, Page Object Model (POM), Faker.js, Cucumber HTML Reporting
- **CI/CD & Tooling:** Jenkins CI/CD, Git, Jira, GitHub, Agile/Scrum
- **Testing Practices:** BDD, Regression, Smoke, Functional, UI, API, Cross-Browser Testing, Test Case Design, Test Planning & Prioritization, Defect Management & Triage
- **Development & APIs:** React, Node.js, Express, MongoDB, JavaScript, REST APIs
- **Programming Languages:** TypeScript, JavaScript, Python, Java

WORK EXPERIENCE

Software Test Automation Engineer | Addis Cloud Jan 2020 - Present

- Designed and maintained production-grade E2E test automation framework for a Fleet Management Application using Playwright, Cucumber BDD, and TypeScript - reducing manual regression effort by 70% following Page Object Model (POM) pattern
- Developed BDD/TDD scripts with Cucumber, authored Gherkin feature files, and implemented Step Definitions aligned to Acceptance Criteria - increasing test coverage across 15+ core application flows
- Applied risk-based test prioritization across Regression, Smoke, Functional, UI, API, and Cross-Browser testing - reducing test execution time by 40% while maintaining full coverage of business-critical workflows
- Integrated automated suites into Jenkins CI/CD pipelines for daily regression cycles - reducing defect escape rate to production by 60% with Cucumber HTML reporting
- Performed API Testing using Postman - applying GET, POST, and PUT methods across 20+ REST API endpoints for functional and regression validation
- Analyzed automation run results daily, identified root causes for failures, and updated scripts per application changes •
- Tracked and managed 100+ defects end-to-end in Jira - repro steps, severity classification, and resolution verification •
- Participated in Agile ceremonies - Scrum, Sprint Planning, Grooming, and Retrospectives with cross-functional teams

Quality Assurance / Concrete Testing Specialist | Advanced Construction Technology Services 2014 - 2017

King Abdulaziz International Airport, Saudi Arabia

- **Verification & Acceptance Testing:** Conducted field and laboratory QA evaluations validating core parameters (slump, temperature, air content, density) against strict acceptance criteria prior to deployment
- **Stress & Load Testing:** Executed destructive compression and stress testing using hydraulic machinery to evaluate failure points and tolerance limits against structural specifications
- **Defect Documentation & Compliance Reporting:** Documented test results and anomalies with 100% compliance against design standards and regulatory specifications
- **Test Environment Preparation:** Prepared and configured test samples and controlled curing environments for standardized laboratory evaluation •
- **Quality Control Monitoring:** Continuously monitored material quality - identifying out-of-spec materials before deployment to prevent structural defects

EDUCATION & TRAINING

- IT Support Specialist Training Program - Per Scholas, Seattle, WA | Jul 2025 - Nov 2025
- Full-Stack Web Development Bootcamp - Coding Dojo (Colorado Technical University), Seattle, WA | Jun 2024 - Dec 2024
- Information Technology Fundamentals - Highline College, Des Moines, WA | 2018 -2020

CERTIFICATIONS

- ISTQB Certified Tester Foundation Level (CTFL) - Dec 2025
- CompTIA A+ - IT Support Specialist - Sep 2025
