SUMMARY

ISTQB CTFL-certified Software Test Automation Engineer with hands-on experience building production-grade E2E frameworks using Playwright, Cucumber BDD, TypeScript, and Jenkins CI/CD. Skilled in Page Object Model, API testing, defect triage, and BDD methodology. Brings real-world QA discipline developed through construction testing at King Abdulaziz International Airport to independently building full-stack applications and automation frameworks.

SKILLS

- **Test Automation:** Playwright, Cucumber BDD, Selenium, TypeScript, Page Object Model (POM), Faker.js, Cucumber HTML Reporting
- **CI/CD & Tooling:** Jenkins CI/CD, Git, Jira, GitHub, Agile/Scrum
- **Testing Practices:** BDD, Regression, Smoke, Functional, UI, API, Cross-Browser Testing, Test Case Design, Defect Management & Triage
- **Development & APIs:** React, Node.js, Express, MongoDB, JavaScript, REST APIs
- **Languages:** TypeScript, JavaScript, Python, Java

WORK EXPERIENCE

Passenger Logistics Facilitator | Prospect Airport Services, Sea-Tac Airport | Sep 2020 - Present

- Managed logistics for 200+ international travelers per shift, sustaining 99.8% routing accuracy under high-volume conditions
- Verified 1,500+ weekly time-sensitive travel documents, applying documentation discipline directly transferable to test case and defect reporting
- Enforced FAA/ADA compliance across 1,200+ annual passenger assists, maintaining a 0% safety incident rate
- While working full time, independently built a production-grade E2E Playwright automation framework and full-stack MERN application, demonstrating self-driven commitment to software engineering

Quality Assurance / Concrete Testing Specialist | Advanced Construction Technology Services | 2014 - 2017

King Abdulaziz International Airport, Saudi Arabia

- Conducted daily slump, temperature, air content, and density tests, validating materials against strict acceptance criteria prior to deployment
- Executed destructive compression and stress testing using hydraulic machinery to evaluate failure points against structural specifications
- Documented test results and anomalies with 100% compliance against design standards and regulatory specifications
- Continuously monitored material quality, identifying out-of-spec materials before use to prevent structural defects

PROJECTS

E2E Test Automation Framework | Playwright, TypeScript, Cucumber BDD, Jenkins CI/CD | 2020 - Present

- Designed and built a production-grade BDD automation framework from scratch using Playwright, Cucumber BDD, and TypeScript, strictly following Page Object Model (POM) pattern for maximum reusability and maintainability
- Built a 29-step regression suite covering the complete user journey: account registration, login, dynamic menu selection, cart state management, and secure cross-origin Stripe iframe payment validation, executing reliably in under 2 minutes
- Applied risk-based test prioritization, deciding which flows warranted full E2E automation versus API or unit-level checks, keeping the suite fast and maintainable
- Integrated into Jenkins CI/CD for daily scheduled regression cycles with Cucumber HTML reporting, surfacing defects immediately after each run
- Used Faker.js for dynamic test data generation ensuring unique credentials on every run, eliminating test pollution and data conflicts
- Solved advanced Stripe iframe challenges: iterated all page frames to locate card fields, used JavaScript `evaluate()` to bypass Stripe Link popup, and targeted aria-label buttons to expand card accordion
- GitHub: github.com/Oumeradem/food-delivery-tests | Live Demo: youtu.be/S0vs8daK1rw

Tomato Food Delivery App | React, Node.js, Express, MongoDB, Stripe | 2020 - Present

- Built and deployed a full-stack MERN food delivery application from scratch, serving as the dedicated application under test for the E2E automation framework above
- Implemented secure JWT authentication, reactive shopping cart with real-time state management, dynamic menu with category filtering, and integrated live Stripe payment processing
- Deployed frontend on Vercel with React Router rewrite rules and backend REST API on Render with MongoDB Atlas, fully live end-to-end
- Live App: tomato-food-delivery-zeta.vercel.app | GitHub: github.com/Oumeradem/food-del

EDUCATION & TRAINING

- IT Support Specialist Training Program - Per Scholas, Seattle, WA | Jul 2025 - Nov 2025
- Full-Stack Web Development Bootcamp - Coding Dojo (Colorado Technical University), Seattle, WA | Jun 2024 - Dec 2024
- Information Technology Fundamentals - Highline College, Des Moines, WA | 2017 - 2020

CERTIFICATIONS

- ISTQB Certified Tester Foundation Level (CTFL) - Dec 2025
- CompTIA A+ - IT Support Specialist - Sep 2025
